QUICK SHEET

ARIA ZERO TRUST PROTECT™

Advanced endpoint agent-based protection solution designed for OT environments.

aria CYBERSECURITY

azt TRUST CENTER

AZT PROTECT offers a unique patented approach that:

- Prevents today's most challenging attacks as well as traditional threats from doing harm on any Windows-based endpoint.
- Supports current and legacy Windows OS variants back to Microsoft Windows XP.
- Delivers advanced application "allow-listing" that locks down OT applications, preventing them from being compromised.
- Installs easily with no endpoint reboot, while using very limited system resources.
- Renders bad code inert, while stopping fileless attacks
- Autonomously stops intruders from attacking a device and from spreading within an OT network.
- Works autonomously, without the need for continuous or any Internet connectivity such as in Air-gapped networks.
- Deploys seamlessly, supporting a strict Air Gapped Model.

From ARIA Cybersecurity

A solution vendor in operation since 1968, publicly traded under symbol: CSPI. Well-known for its role in protecting the US government, its allies, and by Cybersecurity OEMs for providing their solutions advanced detection and response capabilities.

KEY BENEFITS

- **Stops** Zero Day attacks, APTs, malware, ransomware, supply chain attacks, and sophisticated intrusions as they appear automatically.
- **Sets-up and protects in minutes.** 1000 endpoint systems fully deployed in one week. No special training required.
- **No Cybersecurity expertise needed.** Any OT or IT staff can run the solution in minutes. AZT automatically stops attacks. No more false positives and no human error searching for threats.
- **Reduces risk of application vulnerability exploits to near zero.** Reducing need/frequency to patch.
- **Preserves your investment** by protecting legacy OS based platforms.
- **Works transparently** with existing cybersecurity infrastructure.
- **Capable of logging all attack attempts to IT monitored SIEMs.**
- **Reduce staffing overhead** by deploying Aria's 24x7 SOC team to monitor and manage your AZT PROTECT deployment.
- **Linux support** for Enterprise version distributions.
